PEACHES AND NECTARINES

Offered by the

NEW JERSEY PEACH COUNCIL, INC.

New Brunswick, New Jersey

FALL, 1957

SPRING, 1958

EARLY VARIETIES

MAYBELLE (N. J. 164)

A medium to large, white-fleshed, semi-cling of good quality ripening a few days before Sunrise.

SUNRISE (N. J. 133)

An attractive, yellow-fleshed peach of medium size ripening a few days before Early East. It is firm and almost a freestone when ripe. Resistant to peach canker.

CHERRYRED (N. J. 129)

A large, round, non-melting, yellow-fleshed, clingstone which ripens a few days before Red Bird. It can be picked and handled much the same as Red Bird.

EARLY EAST (N. J. 134)

A medium to large, yellow-fleshed peach, ten days earlier than Golden Jubilee. It has hardness, productiveness, and good quality.

JERSEYLAND (N. J. 135)

This large, firm, attractive yellow-fleshed freestone ripens a week before Golden Jubilee. It hangs well to the tree, and is an excellent shipper.

RARITAN ROSE (N. J. 97)

A firm, attractive, white-fleshed freestone of good quality, ripening a few days before Golden Jubilee. The best early white for the roadside trade.

WILDROSE (N. J. 118)

The best white-fleshed freestone to follow Raritan Rose. The fruit is large, round oval, well colored with red, and has a clear white flesh of high quality.

GOLDGEM (N. J. 197)

A large, yellow-fleshed peach that ripens at the same time as Golden Jubilee. It is much firmer and more attractive than Jubilee, resembling Newday in that respect. It is not a solid red peach like Redhaven, but is easier to grow and under average conditions is larger and more productive. It is recommended as a variety for harvesting and marketing between Jerseyland and Triogem.

TRIOGEM (N. J. 70)

A firm, yellow-fleshed freestone of high quality, ripening two to three days later than Golden Jubilee. Very attractive and a good shipper. An excellent commercial variety to follow Jerseyland.

NEWDAY (N. J. 79)

A firm, bright, attractive, yellow-fleshed peach of good quality, ripening with Triogem. It is larger than Triogem, more resistant to bacterial spot and easier to grow.

SUNHIGH (N. J. 82)

A large, firm, attractive, yellow-fleshed variety of good quality ripening a few days earlier than Goldeneast. A popular commercial variety. Not recommended for planting where bacterial spot is severe.

SUMMERQUEEN (N. J. 157)

A large, attractive, firm, yellow-fleshed peach of excellent quality ripening about with Sunhigh and just before Goldeneast. It appears to be less susceptible to bacterial spot than Sunhigh. It has large, showy blossoms with imperfect pollen. The trees set more fruit buds than Sunhigh and are productive

where conditions for cross-pollination are adequate. It is recommended as a variety to replace Sunhigh in areas where bacterial spot is a problem.

REDROSE (N. J. 98)

A firm, highly colored, white-fleshed freestone of high quality ripening with GoldenEast. The trees are vigorous, productive, and hardy.

MID-SEASON VARIETIES

GOLDENEAST (N. J. 87)

A large, firm, attractive, yellow-fleshed freestone of high quality ripening about two weeks before Elberta. An excellent variety to follow Sunhigh.

SUMMERROSE (N. J. 101)

The best large, oval, white-fleshed freestone to follow Redrose in New Jersey. The fruits resemble well-colored Belle of Georgia in shape and appearance, but are firmer, larger, and earlier.

SUMMERCREST (N. J. 94)

A yellow-fleshed freestone of high quality ripening just before Elberta. A popular home canning peach.

M. A. BLAKE (N. J. 117)

A firm, bright, yellow-fleshed freestone of good quality. It has a long harvesting season starting about one week before Elberta, and continuing well into the Elberta season. The fruit remains firm and hangs to the tree after it becomes highly colored. It is rapidly replacing Elberta in many New Jersey orchards.

WHITE HALE (N. J. 63)

A large to very large, white-fleshed freestone of good quality ripening with J. H. Hale. The tree is more vigorous than J. H. Hale. It meets the demand for a large, showy, white-fleshed peach during the Elberta season.

LATE VARIETIES — AFTER ELBERTA

AFTERGLOW (N. J. 84)

A large, high quality, yellow-fleshed freestone ripening immediately after Elberta. The trees are vigorous, hardy, and productive. An excellent variety to prolong the Elberta season. Susceptible to bacterial spot.

LATEROSE (N. J. 109)

This is a white-fleshed freestone ripening a few days after Elberta and White Hale. Hardy, productive and attractive. It has high quality for canning and freezing as well as for slicing fresh.

CONSTITUTION (N. J. 161)

A large, yellow-fleshed, freestone of high quality ripening a week to ten days after Elberta.

FALLATE (N. J. 183)

An attractive, white-fleshed freestone peach of high quality and good size, ripening a week to ten days after Elberta or about with Constitution. It is a promising white peach to follow Laterose.

AUTUMN (N. J. 145)

The latest, large, yellow freestone, ripening fully ten to fourteen days after Elberta. Later than Rio-Oso-Gem. The tree is a vigorous grower and should be planted on well-drained, good peach soil.

FROSTQUEEN (N. J. 185)

A white-fleshed, freestone peach ripening about a week after Fallate, and at least two weeks after Elberta. An excellent white peach to follow Fallate.

NECTARINES

NECTAROSE (N. J. 9)

A large, white-fleshed freestone, ripening just before Garden State, or about with the Sunhigh peach.

GARDEN STATE

A large, firm, yellow-fleshed freestone of high quality ripening with the Goldeneast peach. It is very desirable for slicing, canning, and freezing.

NECTAHEART (N. J. 10)

A large, white-fleshed freestone completely shaded with red, ripening immediately after Garden State.

NECTACREST (N. J. 8)

This large, attractive, white-fleshed freestone, usually ripens with the Summercrest peach at New Brunswick or about one week after Nectaheart.

NECTALATE (N. J. 4)

This is the latest variety to ripen among all the nectarines offered by the New Jersey Peach Council. It usually ripens with the Afterglow peach, or nearly two weeks later than Nectacrest.

LOW ACID PEACHES

HONEYGEM, yellow freestone. Few days after Elberta.

NEWCHEER, white freestone. Few days after Elberta.

NEW JERSEY PEACH COUNCIL RECOMMENDED GRADES AND PRICES FALL 1957 — SPRING 1958

(Subject to change without notice.)

<i>GRADE</i>	<i>1 to 9 trees</i>	<i>10 to 24 trees</i>	<i>25 to 99 trees</i>	<i>100 to 249 trees</i>	<i>250 to 499 trees</i>	<i>500 trees and up</i>
18 to 24 inches.....	—	—	\$0.75	\$0.65	\$0.55	\$0.45
2 to 3 feet	—	—	.80	.75	.65	.55
3 to 4 feet	\$1.75	\$1.25	1.00	.85	.75	.65
4 to 5 feet	1.75	1.25	1.00	.85	.75	.65
5 to 6 feet	2.25	2.00	1.50	1.00	—	—

Trees may be secured at the C. H. Steelman Fruit Nursery on the Clarks-ville-Port Mercer Road, about one-quarter mile from State Highway Route 1. Telephone PRinceton 1-2525 (After December 1, WALnut 4-2525). Small shipments to distant points, including all orders for less than 25 trees, will be sent by express collect unless otherwise specified on the order blank.

PLACING ORDERS

All orders for trees should be sent to the New Jersey Peach Council, Inc., R. D. No. 3, Princeton, New Jersey. Orders for Fall delivery will receive first consideration.

A deposit equal to 10 per cent of the total cost of the trees is required with each order and the balance before delivery.
